
```
#include <stdio.h>

int main(void) {
    int i = 1, j = 1, k = 1, l = 4, m = 1;
    while (i <= 3) {
        while (j <= 5) {
            while (k <= i) {
                while (l >= j) {
                    printf(" ");
                    --l;
                }
                while (m <= j) {
                    printf("*");
                    ++m;
                }
                l = 4;
                m = 1;
                ++k;
            }
            printf("\n");
            k = 1;
            ++j;
        }
        j = 1;
        ++i;
    }
    return 0;
}
```
